

## **E4 Software:** Enhancing the User Experience

TANDBERG once again adds more features and functionality to ensure investment protection and a consistent, reliable in-call experience.

### **New Intelligent and Scalable Directory**

This new client/server directory enables users to search in a centralized corporate directory with the press of a button, and gives instant access to an updated directory managed through TANDBERG Management Suite (TMS). The directory leverages all corporate directories supported in TMS version 9, including LDAP, ILS, Active Directory and H.350. Search results are automatically adjusted and give correct video or telephone numbers depending upon endpoint capability, network, capacity and location. For easy dialing, it automatically uses ISDN gateways\*, neighboring gatekeeper zones\* and international dialing rules if required.

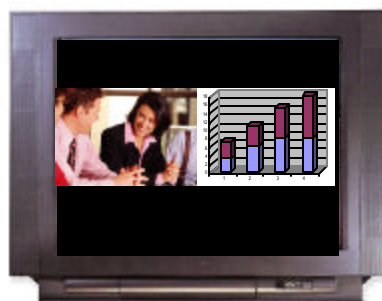

\*requires equipment from TANDBERG or 3rd party supported by TMS

### **Enhanced Presentations with H.239**

H.239 is the International Telecommunications Union (ITU) standard for adding media channels to video meetings. Implementing H.239, TANDBERG ensures interoperability between vendors and sets a new standard for presentation features over ISDN and IP.

### **See Presenter and Presentation on a Single Screen**

If two screens are not available, presenter and presentation can still be viewed simultaneously, side-by-side on a single screen\*. Ideal for rooms with projectors or single monitors, this feature gives users more flexibility in creating collaborative environments. Available on all dual monitor capable TANDBERG systems. \*E-series only

### **Enhanced Security with H.235 v3**

The first vendor to support encryption (DES and AES) over ISDN and IP, we now support the updated version 3 of encryption over IP (H.235 v3). Implementing version 3 of the H.235 standard enhances security and increases interoperability with other vendors. E4 software also supports H.235 v2 for backwards compatibility.

### **Other Features**

*Auto Network Address Translator (NAT)*- designed for small office/home office (SOHO) users, Auto NAT enables the endpoint to make calls internally and externally on the LAN when configured and used with a NAT device.

*H.245 DTMF*- a touch tone standard for IP calls that increases interoperability with VoIP solutions, IP-only MCUs and Cisco CallManager.
